TCSS 445: DATABASE SYSTEMS DESIGN (WINTER 2016)

PROJECT PHASE 3: SUMMARY

QUICK SUMMARY

Project Website URL: http://students.washington.edu/glynng/resume_tracker/index.php

Suggested Login Credentials for Testing Different Features:

User Type:	Recruiter	Job Seeker
Email:	recruiter1@gmail.com*	seeker1@gmail.com*
Password:	password	password

*emails are fictional/we did not create them if they do exist

See README.txt file for more information on features and testing.

CHANGES FROM PHASE II

We basically chose not to implement keeping track of interviews and job applications. We were able to implement most of our features in some way. We were not able to implement as much searching as we would like. However, we were still able to implement basic searching through SQL queries and update the information for ease of access for the user.

In the resume_website table, we added fields for direct upload of html and css code, as well as a field to indicate if the resume website was hosted by our website or elsewhere. Our website does not yet parse the HTML and CSS code, however, we still have a dynamic system that adds a new directory for each user. We also did not add a way to upload and host photos on the site.

Over all, we did get lot of what we proposed completed. Within a single week, we learned PHP, HTML, and CSS and how to tie everything together with both a web server and MySQL Database.
